Title: ELECTRODE STRUCTURE OF A PLASMA DISPLAY PANEL

To: Commissioner for Patents

P.O. BOX 1450

15

Alexandria, VA 22313-1450

Subject:

1. Information disclosure statement under 37 CFR §1.56.

20

2. Petition to request consideration of the information disclosure statement.

Dear Sir:

Match and Return

25

This is an Information Disclosure Statement in accordance with the duty to disclose information material to patentability under 37 CFR §1.56. The applicant wishes to make of record the document listed on the accompanying form PTO/SB/08. It is respectfully requested that the examiner initials the cited reference on the form and that it be made of record in the application and that a copy of the initialed

form be sent to the applicant with the next communication from the examiner.

Since the IDS is filed after the issue of the final
5 Office action, a petition to request consideration of
the information disclosure statement is hereby
requested according to 37 CFR §1.97(e)(1). The prior
art patent contained in the information disclosure
statement was cited in communications from the Chinese
10 Intellectual Property Office on Sep. 12, 2003 for a
counterpart foreign application. Since this IDS is
being submitted within three months of the date in which
this prior art patent was first cited, the applicant
sincerely hopes that the examiner can consider the item
15 contained in this IDS.

According to the requirement set forth in 37 CFR
§1.98 and MPEP 609 (Rev.1, Feb. 2000), the applicant
is submitting a copy of Chinese patent document CN
20 publication No. 1269570A (published Oct. 11, 2000),
Japanese patent documents JP publication No. 11-297214
(published Oct. 29, 1999) and JP publication No.
2000-123750A (published Apr. 28, 2000), US patent No.
6,031,329 (filed Mar. 27, 1998), and a concise
25 explanation of the relevance to this application
hereinafter. For convenience, claim 1 of the present
application is appended at the end of this response.

Fig. 4 of CN 1269570A appears to be the most relevant
30 drawing, and shows a plasma display panel with a first
auxiliary electrode 20 positioned in a first gap between
a first sustaining electrode 14 and a second sustaining

electrode 13. Since the first auxiliary electrode 20 disclosed in CN 1269570A is not electrically connected to the first sustaining electrode 14, and does not comprise a second part located above the first sustaining electrode 14, the claimed invention of the present application is significantly different from the teachings in CN 1269570A.

JP 11-297214 discloses a plasma display panel. As shown in Fig. 2 of JP 11-297214, the plasma display panel comprises a discharge gap 21 positioned between two sustaining electrodes 2. The plasma display panel further comprises an auxiliary electrode 3, and a portion of the auxiliary electrode 3 is located above the sustaining electrode 2. Since JP 11-297214 never teaches that the auxiliary electrode 3 can be formed in the discharge gap 21, it is believed to be significantly different from the claimed invention of the present application.

JP 2000-123750A discloses a plasma display panel. As shown in Fig. 3 of JP 2000-123750A, the plasma display panel comprises a plurality of ribs 40 formed on a back substrate. The ribs 40 are parallel to each other and perpendicular to the first auxiliary electrode 70. The plasma display panel further comprises a first sustaining electrode 61 and a second sustaining electrode 62. The first auxiliary electrode 70 is positioned in a first gap between the first sustaining electrode 61 and the second sustaining electrode 62. However, the first auxiliary electrode 70 is not electrically connected to the first sustaining

electrode 61. The first auxiliary electrode 70 does not comprise a second part located above the first sustaining electrode 61, either. Therefore, the claimed invention of the present application is significantly
5 different from the teachings in JP 2000-123750A.

US 6,031,329 is one the prior arts cited in Office action dated 04/15/2003 and has been considered by the Examiner.

10

Present application claim 1 (which was amended in response to Office action dated 04/15/2003):

1. (amended) An electrode structure of a plasma display
15 panel (PDP), the electrode structure formed on a front substrate of the PDP, and comprising:

a first sustaining electrode and a second sustaining electrode set on the surface of the front substrate, and a first gap existing between the first and second
20 sustaining electrodes; and

a first auxiliary electrode electrically connected to the first sustaining electrode, the first auxiliary electrode comprising a first part and a second part in contact with the first part, the first part formed
25 in the first gap, and the second part located above the first sustaining electrode;

wherein a second gap existing between the first part of the first auxiliary electrode and the second sustaining electrode is used as a discharge gap of the
30 electrode structure of the PDP, and the width of the second gap is smaller than the width of the first gap.

Respectfully Submitted,

5 Winston Hsu
